

Intelligent Security

Managed Extended Detection & Response

AI-driven cyber threat hunting to
defend your entire environment 24x7

Managed Extended Detection and Response (MXDR) is our unified security incident platform, delivered as a service, that leverages AI and automation. It offers a holistic approach to protect against and respond to advanced cyberattacks.

Delivered through our 24x7 global SOC, we expand coverage beyond targeted systems like endpoint detection and response (EDR), by extending detection, investigation, and response capabilities across multiple domains, including hybrid identities, cloud applications, email, and data stores.

The benefits of MXDR

Our top tier MXDR capability enhances our security operations (SecOps) with advanced visibility into cyberattack chains, AI-driven automation, and broad threat intelligence to protect your business.

Increased observability

XDR expands an enterprise view, integrating telemetry from multiple domains to uncover threats that might otherwise go undetected.

Automated Response

XDR technology can identify cross domain threats in real time and deploy automated actions to isolate compromised identities or assets.

SOC protection

MXDR is delivered through our global SOCs, comprised of a level 1-3 team made up of specialist skills to remediate any potential cyber threats to your business at all hours.

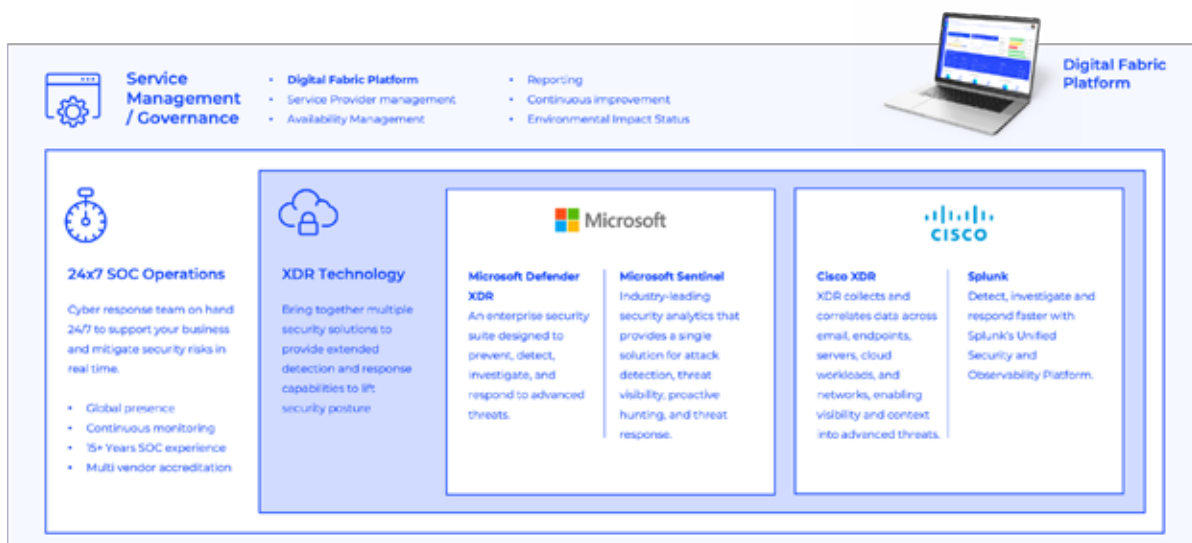

Global Threat IP

Stay ahead of global threats with access to Logicalis Global Threat Intelligence IP and partners such as Cisco Talos, Defender Threat Intelligence, MISP and more.

The MXDR Security Blueprint

As Logicalis we are able to offer leading technology from strategic partners to ensure you have the right MXDR fit for your environment.

Utilise the best of Microsoft & Cisco XDR

We are one of only a few Microsoft partners to have achieved Global MXDR status. This achievement recognises our robust MXDR capability delivered through our Security Operations Centre, built on expert integrations with Microsoft technology, verified by Microsoft engineers.

Microsoft Intelligent Security Association

Logicalis are the first and only organisation able to offer Cisco XDR technology, as a managed service, globally to customers.

This gives Logicalis and our customers a unique benefit to take advantage of integrations across Microsoft and Cisco technologies, to increase and improve visibility of their digital estate.

How we get you there

We help you along the journey towards achieving Intelligent Security - with speed and efficiency, using our tried and tested methodology.

Align

We align your business with one of our Intelligent Security experts who will conduct a series of guided workshops and discovery session to align your business requirements with the MXDR solution. Logicalis MXDR is priced per device or data source, to offer predictable and accurate pricing.

Transform

Our global/local professional services teams will set up the MXDR service, followed by hands on tuning to ensure high fidelity alerts and alignment with your business systems and stakeholders.

Scale

Seamless transfer to SOC management with additional workshops to review implementation and walkthrough workflow and expectations. Your environment is now monitored and protected 24x7 by our global team, allowing your team to focus on business projects.

“”””

We generate about 170,000,000 events a month. There is no way our internal security team would be able to review that amount of data without partners and their threat intelligence to help identify potential threats.

Global CISO, Global Enterprise Organisation

Be the guardian of your digital future

Innovate and advance. Be where you want to be, following an Intelligent Security blueprint for success with Logicalis by your side.
