

Intelligent Security

**Managed Extended
Detection & Response**

AI-driven MXDR is our unified security incident platform, delivered as a service, that leverages AI and automation. It offers a holistic approach to protect against and respond to advanced cyberattacks.

The benefits of MXDR

As a global Managed Security Service Provider, Logicalis partners with the leading Security vendors to offer the most comprehensive MXDR service on the market.

Increased observability

XDR expands an enterprise view, integrating telemetry from multiple domains to uncover threats that might otherwise go undetected.

Automated Response

XDR technology can identify cross domain threats in real time and deploy automated actions to isolate compromised identities or assets.

SOC protection

MXDR is delivered through our global SOCs, comprised of level 1-3 team made up of specialist skills to remediate any potential cyber threats to your business at all hours.

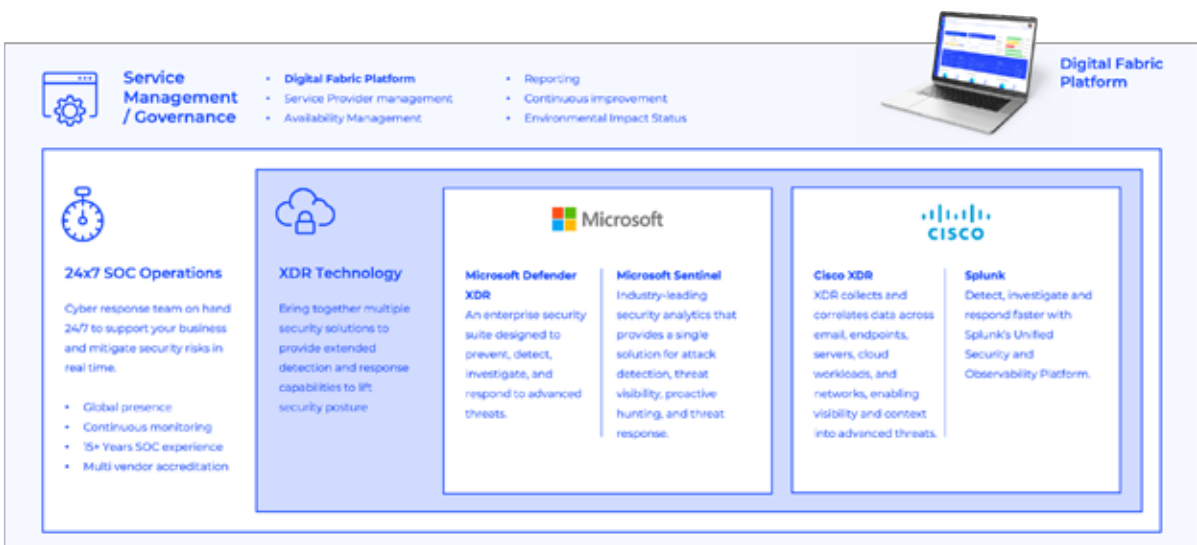

Global Threat IP

Stay ahead of global threats with access to Logicalis Global Threat Intelligence IP and partners such as Cisco Talos, Defender Threat Intelligence, MISP and more.

The MXDR Security Blueprint

As Logicalis we are able to offer leading technology from strategic partners to ensure you have the right MXDR fit for your environment.

Utilise the best of Microsoft & Cisco XDR

We are one of only a few Microsoft partners to have achieved Global MXDR status. This achievement recognises our robust MXDR capability delivered through our Security Operations Centre, built on expert integrations with Microsoft Technology, verified by Microsoft engineers.

Logicalis are the first and only organisation able to offer Cisco XDR technology, as a managed service, globally to customers.

This gives Logicalis and our customers a unique benefit to take advantage of integrations across Microsoft and Cisco technologies, to increase and improve visibility of their digital estate.

“””

We generate about 170,000,000 events a month. There is no way our internal security team would be able to review that amount of data without partners and their threat intelligence to help identify potential threats.

Global CISO, Global Enterprise Organisation
